

AMBERG

DESK SYSTEMS

AMBERG DESK SYSTEMS FIT YOUR SPECIFIC NEEDS!

With the Amberg Desk System, you're the boss! Design and arrange the system just the way you want it! Free-standing, modular componentry allows Amberg to fit the individual needs of the user. Components available include: desks, returns, bridges, credenzas, corner units, privacy screens, modesty panels, pedestals and overhead storage units. Clustered desk arrangements and "D" shaped peninsula worksurfaces provide ample space for impromptu meetings. A multitude of laminate surfaces, edge treatments and a full palette of paint colors are available to meet the needs of each office environment.

The PowerUp™ module allows for easy worksurface power and data access. The cover is designed with notches that route the data cords when the module is closed.

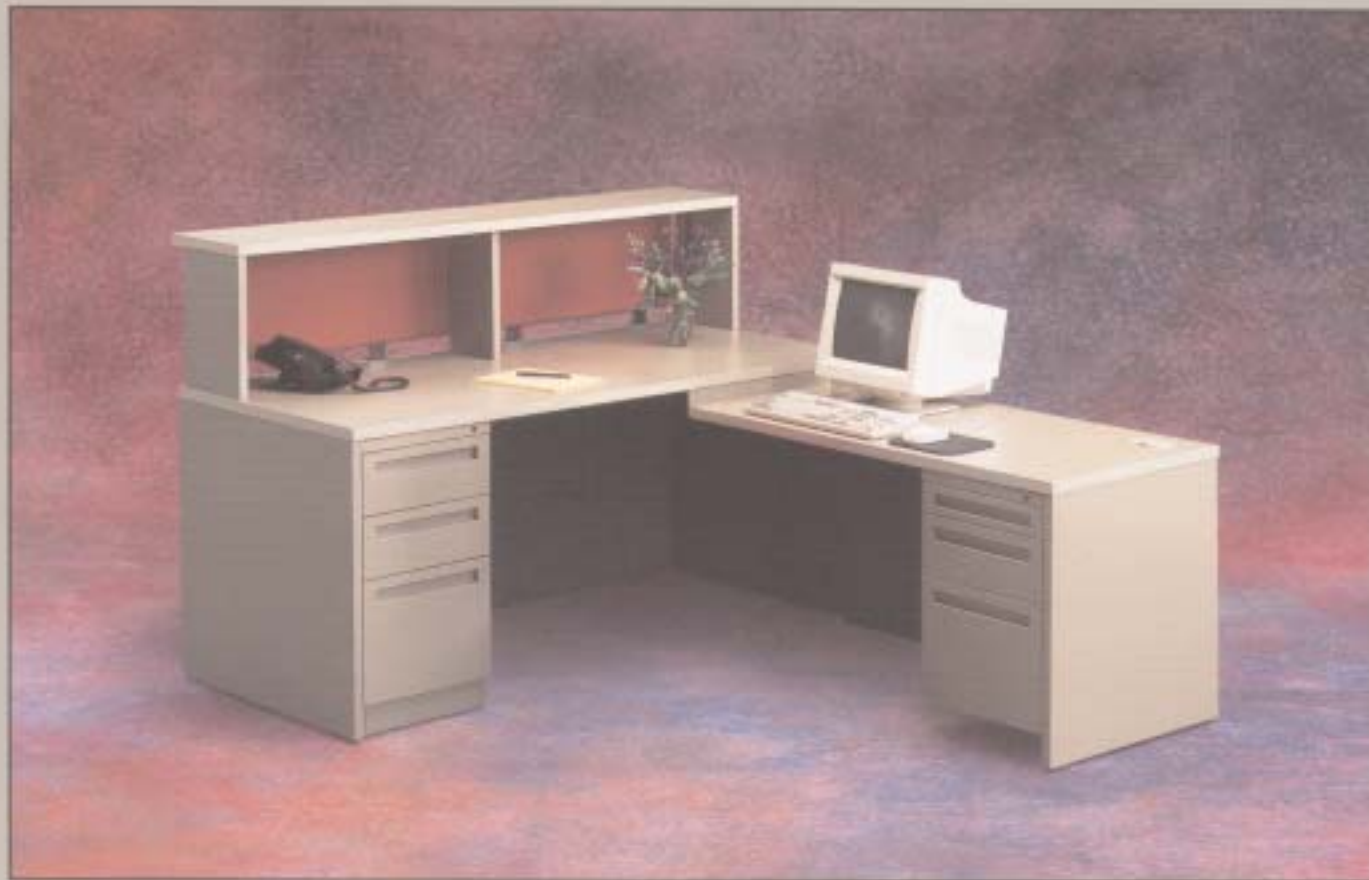

Wire management grommets can be located in various locations on the worksurface and on the desk end panels.

Privacy screens clamp to the worksurface and are removable. They are available in two heights.

Cords from the worksurface tops are managed via a wire raceway under the surface. Desk-to-desk distribution of cords is accomplished through end panel grommets.

AMBERG DESK SYSTEMS. THE ERGONOMICALLY CORRECT CHOICE!

The Amberg Desk System combines ergonomic design and technological advances for the offices of today and tomorrow. Desks, returns, bridges and credenzas are produced with built-in wire management raceways. Returns and bridges are available in 29" or 26" high typing-heights. Optional components include CPU holders (that attach under the worksurface), articulating keyboard pads and task lights (which mount to the underside of the overhead storage units).

A countertop unit with a fabric-covered privacy panel is available for attaching on the worksurface.

An optional transitional bracket allows for use of a lower 26" typing-height workstation. An opening at the end of the bracket allows for cord pass-through.

Open overhead storage is available on the stationary shelves that sit 19" above the work surface. A retractable flipper door unit is also available. It operates on a rack and pinion mechanism, allowing the door to recess into the cabinet.

Series XXI mobile, stationary or hanging pedestals are available for use with the Amberg Desk System in various depths and drawer configurations.

AMBERG

The 36" deep Amberg Desk offers a 6" overhang on the visitors side to allow for ample knee clearance.

A basic Amberg Desk unit can be easily expanded by adding a return unit on the right or left end.
